

# POINT-TO-POINT PLASTIC CHAIN CONVEYOR SYSTEMS

Point-to-point plastic chain conveyor systems feature a modular design to fit the curves and elevation changes of your plant with the flexibility to reconfigure your system when those things change. These systems can be anything from a simple turn between two machines, to multiple conveyors working together to bring product through every step of production.

## FEATURES AND BENEFITS

### MODULAR DESIGN

Flextrac Series conveyors feature modular components — curves, vertical bends and straight sections — that can be configured in infinite ways to fit your plant. When your layout changes, parts can be added or removed to adapt it to the new layout.

### WHEEL BENDS

Wheel bends allow tight turns anywhere along the length of the conveyor. The free-spinning wheel reduces friction, making these the preferred method for turns.

### PLAIN BENDS

Horizontal Plain bends are used for turns with a wider radius. Vertical Plain bends elevate or lower product as it is being conveyed. On conveyors where multiple plain bends are used, the total of all angles cannot exceed 180°.

### T-SLOT DESIGN

The frame is constructed with a t-slot design that simplifies integration. It can be used to mount accessories, supports and guides.

### PLASTIC CHAIN

Plastic chain has the ability to make turns and elevation changes within a single conveyor. These durable chains are also modular, with individual links that can be replaced to make chain repairs.

## APPLICATIONS

Packaging

Automation & Assembly

Automotive

Brewery

Food Processing

Material Handling

Pharmacy & Medical

Marking & Coding

Point-to-point Conveyor Systems | Flextrac Series

### PLASTIC CHAIN TECHNOLOGY BY MODU

With more than 25 years experience, Modu is a leader in modular plastic chain conveyors.

**Length**  
up to  
98.5'

**Max Part Weight**  
33 – 66 lbs

Dependent on width

**Max Load**  
440 –  
880 lbs

Dependent on width

**Speed**  
up to  
164 fpm
